

## BURRTEC expands Fontana Material Recovery facility and transfer station with Lubo C&D processing line.

**BURRTEC, a large private waste hauler and recycler in Los Angeles, Riverside, and Orange County, will soon be installing additional processing equipment to better serve their customers.** The new sorting line will be equipped to handle construction and dry commercial waste loads, and can also be used to clean up source segregated organics before composting. The line will be capable of processing 20-30 tph and includes the latest AWS screening technology from VAN DYK Recycling Solutions and Lubo. Lubo's patented AWS screen enables effective screening of challenging loads without the typical wrapping and maintenance of conventional screening alternatives. Multiple AWS screens have been installed and have proven to be an affordable alternative to more expensive trommels and slower shaking screens.

VAN DYK Recycling Solutions is North America's leading designer and system supplier of world-class recycling and recovery technology, and the exclusive distributor of Bollegraaf, Lubo, and TITECH machinery. They specialize in proven technology in the fields of sizing, sorting, recovery, and baling of recyclables. Their systems provide solutions for single stream, commercial waste, C&D, MSW, waste-to-energy/fuel, presorted plastics, and e-waste markets. Technologies in their arsenal include high-capacity pre-press flap balers, sensor based sorters, PaperMagnets®, StarScreens®, PaperSpikes®, density separators, air systems, trommel screens, and more. Boasting 2,400 profitable plants, their turnkey service fully equips with design, installation, training, and superior, lifelong support.
