

## Second Densimetric Table in U.S. installed at ZWEDC in San Jose, CA

August 24, 2015

**Zero Waste Energy Development Company LLC (ZWEDC) of San Jose, CA purchased the second densimetric table in the U.S.** The first d-table went to sister company Z-Best Composting Facility of Gilroy, CA, in 2013. Both were installed by Connecticut based system supplier VAN DYK Recycling Solutions.

ZWEDC's unit has a capacity of 12-15 tph and is processing post dry AD digestate after wind rows to remove glass/inerts and generate a sellable or divertible compost product. ZWEDC's commercial dry fermentation anaerobic digestion facility is the largest in the world. The densimetric table is a new and innovative application that upgrades compost purity for supply to outlet markets. It can remove over 99% of compost contamination such as glass, plastics, stones, and stickers, and increase the goal of organics diversion from landfill.

For more information on the densimetric table, contact VAN DYK Recycling Solutions at 203-967-1100 / [info@vdrs.com](mailto:info@vdrs.com)
